I can use variables effectively to program a program | LessonID: 183

Your task is to create a brand new car driving game called Dirt Drifters. In this game, the speed of the car must change as the game is played; if you drive on the grass it slows down, but at certain times, an after burner may be used!

Start with a really basic track design. This will help you debug your game. Only when you know everything is working should you take the time to improve your design.
