I understand what operators are and how they are used

LessonID: 185

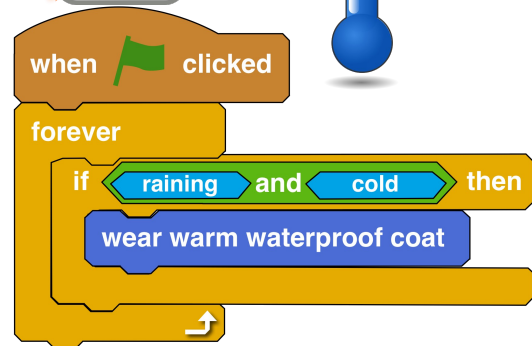

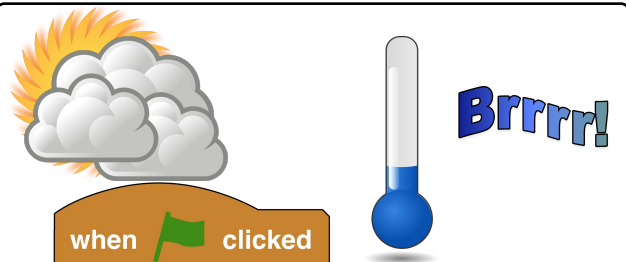

Operators are at the core of computer coding. They help us make more complicated decisions as well as carrying out calculations.

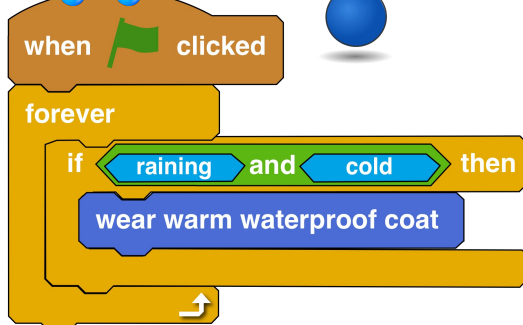

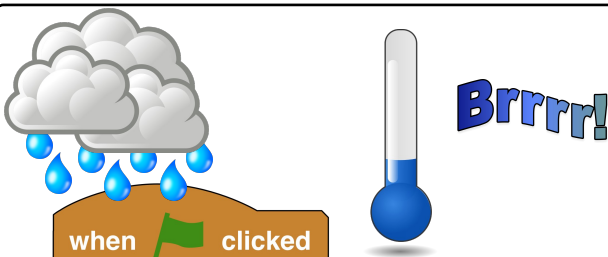

Logical operators work with true or false responses. Look at how these **logical operators** are used in these IF statements. For each one, decide whether the code within the IF statement will run or not.

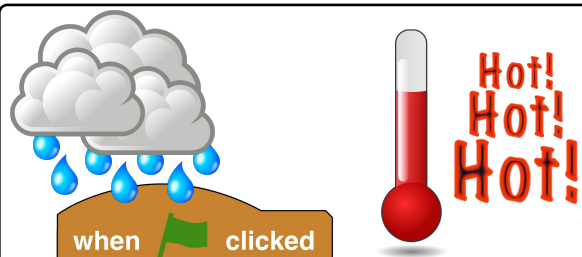

- ☐ IF statement code will run
- ☐ IF statement code will not run

- ☐ IF statement code will run
- ☐ IF statement code will not run

- ☐ IF statement code will run
- ☐ IF statement code will not run

- ☐ IF statement code will run
- ☐ IF statement code will not run
