I can identify ways in which computers control external hardware.

LessonID: 462

Computers can connect to external hardware in a number of ways.  
Most computers provide very simple connections to hardware,  
such as to a monitor, a mouse or a keyboard.

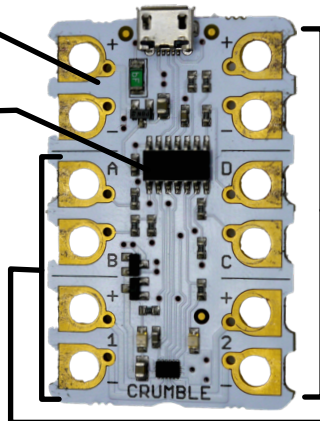

If we want to connect to a broader range of hardware, our  
computer needs an .....

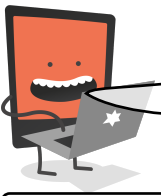

Complete the boxes below, detailing how the Crumble works.

To power the Crumble, we connect ..... to  
the ..... and ..... terminals

This is the .....  
This is the brains of the  
computer.

We can connect other  
components to  
these .....,  
such as .....  
.....  
.....

Input devices allow our programs to sense for an input.  
Output devices allow our programs to control external hardware.  
List as many input and output devices as you can.
